Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

The pending claims 1, 3, and 5-8 comprise 16 inventions, each of which is drawn to a different nucleic acid molecule encoding an amino acid sequence. Each individual sequence represents a structural and functionally distinct entity that is capable of supporting a separate patent. The search and consideration of more than a single sequence constitutes an undue search burden on the office, given the ever-increasing size of the database.

The Examiner notes that this is not a species election requirement; rather it sets forth 16 invention groups. Applicant is advised that a reply to this requirement must include an identification of an amino acid or nucleic acid sequence that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48 (b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48 (b) and by the fee required under 37 CFR 1.17 (l).
